

Armor for Windows and Doors

BULLET SHIELD™

Keep the Bad Guys Out with Retrofit Ballistic Protection

A derivative of DefenseLite®, BulletShield™ is a bullet resistant security glazing system installed over existing window and door glass. Dubbed “Body Armor for Windows,” BulletShield is independently tested to meet UL752 ratings for ballistic protection. This patented retrofit protects the most targeted area of your glazing - the vision panel.

Ballistics – Blasts – Forced Entry

Considered a deadly projectile, glass is a building’s weakest link. A blast from an explosion does not discriminate, expanding radially from its point of origin until encountering solid structures like walls, windows and doors.

BulletShield works to contain fragmented glass from causing harm to building occupants and meets the glazing industry’s most trusted ballistic and blast standards.

Anatomy of BulletShield

- 1 Patented vented extrusion mounts to the existing glazing frame creating standoff for the polycarbonate shield from primary glass
- 2 “Super bond” anchoring method secures the engineered system to the existing glazing providing for unmatched flex, tensile and tear strength upon attack
- 3 “Unbreachable” UV capped, clear polycarbonate shield is secured to the vented extrusion with security “flex” screws and elastomeric VHB tapes
- 4 Customized powder-coating creates full aesthetic integration with existing glazing upon retrofit installation

Who needs BulletShield?

- Schools
- Government Buildings
- Commercial/Retail
- Hotels
- Hospitals
- Police / Law Enforcement
- Soft Targets

Commercial

Hotels, hospitals and restaurant facility managers' first priority is to ensure the safety and protection of guests, patients and employees from impending threats. BulletShield's custom fabricated retrofit security glazing solutions will upgrade your property to meet today's challenges. Our ultra-strong polycarbonate security shields are professionally installed, designed to be virtually invisible while protecting your property and people.

Retail

Prevent 'smash and grab' attacks with BulletShield's retrofit storefront security glazing system. Clear, polycarbonate security shields blend effortlessly with the existing glazing system, keeping your merchandise safe from theft and damage while still perfectly visible to customers.

Government

With high target areas, extra safety precautions should be taken to protect sensitive material and government staff. Government buildings can be easily upgraded with BulletShield to protect against ballistic attack while providing immediate protection from active threats, delaying active shooters long enough for law enforcement to intervene.
